EDUCATION

Atharva College of Engineering

Btech in Electronics and Telecommunication

Mumbai, Maharashtra

June 2019 - Aug 2023

Viva College of Diploma in Engineering and Technology

Diploma in Electronics and Telecommunication

Mumbai, Maharashtra

June 2016 - March 2019

TECHNICAL SKILLS

Skills: DSA, Reactjs, Nodejs, Nextjs, TypeScript, Tailwind, MongoDB, C + + , python

WORK EXPERIENCE

Teaching Assistant

Edureka, Bengaluru, India

Feb 2024 - Apr 2024

- Provided timely support to interns on front-end and back-end technologies, including HTML, CSS, Bootstrap, JavaScript, React.js, Node.js, and Express.js
- Assisted in debugging code and clarifying key full-stack development concepts.
- Guided interns in structuring and developing major projects such as web clones and backend services.
- Collaborated closely with the instruction team to deliver an engaging and productive learning experience.
- Supported projects involving Socket.io, Next.js, and MongoDB for real-time and full-stack development.

Full Stack Web Development Intern

Edureka, Bengaluru, India

Jan 2023 - Oct 2023

- Awarded the Super Intern Certificate for outstanding performance and contribution.
- Completed a rigorous, hands-on internship in full-stack web development, working with technologies such as HTML, CSS, Bootstrap, JavaScript, React.js, Node.js, and Express.js.
- Designed and developed full-fledged applications from scratch, covering frontend UI, backend logic, API integration, and deployment.

PROJECTS

- **Spotify-Chat-Clone**, A real-time music-based chat application is designed to create a dynamic and engaging social experience for music lovers. The backend is built using JavaScript, Node.js, and Express.js, while the frontend leverages TypeScript, React.js, Tailwind CSS, and Zustand for a smooth state management. Real-time communication is powered by Socket.io, enabling seamless live messaging between users. Clerk is integrated for secure authentication. The app allows users not only to chat in real-time but also to see what songs others are currently listening to, enhancing the sense of connection through shared music experiences. Cloudinary is used to efficiently store and manage image and audio files, and MongoDB serves as the database. Overall, the application blends social interaction with music sharing to create a unique and immersive digital environment. [Try it](#)
- **Anonymous Message**, This is a Next.js app that lets users send anonymous messages to others in a secure way. Built with TypeScript and Auth.js for authentication, it features a clean and modern UI using Tailwind CSS and ShadCN components. Mongoose is used to handle the database, and Zod ensures reliable schema validation. A standout feature of this app is its integration with Google Generative AI(Artificial intelligence), which provides smart, creative message suggestions—making it easier for users to express themselves anonymously. [Try it!](#)
- **Cab-Booking**, This is a full-stack cab booking application that connects passengers with nearby drivers in real-time. The backend is built using Node.js and Express.js, with MongoDB as the database to store user data, ride details, and driver information. The frontend is developed using React.js and JavaScript. For location services, the app integrates the Google Maps API to fetch the user's current location, calculate routes and fare. Real-time communication between the user and driver is handled using Socket.IO, which facilitates features like OTP verification and live ride status updates. Together, these technologies create a smooth, real-time booking experience with accurate location tracking and secure verification.

EXTRACURRICULAR ACTIVITIES

- **Team Managment** in Atharva Educational Trusts College of Engineering
